

HI782

Marine Nitrate High Range

Handheld Colorimeter

- Ideal for aquariums and marine biology
- Easier to use and more accurate than chemical test kits
- Small size, big convenience

Nitrate is a by-product of the Nitrogen cycle. Excessive amounts of Nitrates in a marine aquarium can promote the growth of undesirable organisms including algae and dinoflagellates and increase the risk of livestock illness or death.

The HI782 Marine Nitrate HR (High Range) Checker HC is a handheld colorimeter that uses the Beer-Lambert principle to determine the concentration of nitrate colorimetrically. The HI782 is designed specifically to measure high levels of nitrate in a saltwater aquarium. The 0.0 to 75.0 ppm range is ideal for coral/fish or fish-only aquarium maintenance.

Specifications	HI782 (HR)
Range	0.0 to 75.0 ppm (as NO ₃ ⁻)
Resolution	0.1 ppm
Accuracy	±2.0 ppm ±5% of reading @ 25 °C (77 °F)
Light Source	Light Emitting Diode @ 525 nm
Light Detector	Silicon photocell
Method	Zinc reduction method. The reaction between nitrate and the reagent causes a pink tint in the sample. This checker has been developed to work with seawater samples.
Environment	0 to 50 °C (32 to 122 °F); max. 95% RH non-condensing
Battery Type	1.5V AAA Alkaline
Auto-off	After 10 minutes of non-use
Dimensions	86.0 x 61.0 x 37.5 mm (3.4 x 2.4 x 1.5")
Weight	64 g (2.3 oz)
Interferences	Nitrite
Ordering Information	HI782 Checker HC is supplied with sample cuvette and cap (2 pcs.), Marine Nitrate High Range reagent starter kit (reagents for 10 tests), 3 mL Pasteur pipette (1 pc.), 1.5V AAA Alkaline battery (1 pc.), and instruction manual
Reagent Set	HI782-25 Reagents for 25 Marine Nitrate High Range tests
Calibration Set	HI782-11 Marine Nitrate HR certified standard kit
